

Abstract

A shoe has a sandal and a removable bootie. The sandal is provided with at least one adjustable strap for securing the sandal about a wearer's foot and includes an outsole. The removable bootie is adapted to cover the wearer's foot and includes a sole, the removable bootie may be provided with an attachment system such as laces or straps for securing the bootie about the foot. The sandal and the bootie are configured to cooperate with each other so that when the bootie is inserted into the sandal and secured therein, the sandal and bootie combination results in the shoe, and wherein the sandal and the bootie can be worn independently of each other.
